Net volume: 100ml

Nucleotides are the basic units that build DNA and RNA nucleic acids, whose importance in the body lies in the ability to regenerate and form new cells. They are also a component of important cofactors that participate in the biochemical processes of our body. The demand for nucleotides increases during the development of children, strenuous physical and mental work and the elderly.

Vitamin C contributes to:

- reduction of tiredness and fatigue
- maintaining normal energy metabolism

Vitamin C helps in:

- the proper functioning of the immune system
- protecting cells against oxidative stress
- the proper functioning of the nervous system
- maintaining normal psychological functions
